Community Safety

Systems Technologies can equip your community with wireless transmitters providing management with the assurance that their community members are safe and sound. If a bathroom or bedroom emergency pull station or personal pendant transmitter is activated, the system will automatically provide notification up to ten different ways such as calling a telephone number, as a text message to cellular phones, pocket pagers or email addresses, to a central monitoring station and more.

System Flexibility

Since devices are wireless and alerting is flexible, a gated community or HUD can start with a few devices and expand the system as needed. Small, inconspicuous repeaters simply plug into an available electrical outlet and ensure that any emergency signals can be transmitted and received whether indoors or outdoors. Vision Link® provides an inexpensive, flexible, scalable, integrated solution for communities looking to provide a higher level of safety for all residents.

Alarm Notification

When any transmitter is activated, a signal is instantly and silently sent to all personnel or devices programmed to receive the alarm message. The message includes the apartment number, area, or individual needing assistance. If the alarm event is not cancelled at the source within a preprogrammed number of minutes, the incident will escalate to cell phones, two-way radios, central monitoring station or however best fits your requirements.

The 900MHz Advantage

Because the FCC allows higher transmit power for 900 MHz spread spectrum systems, Vision Pro provides superior in-building range and up to 10 times the range of 300 MHz products. Systems Technologies products are "fully supervised" with automatic "self-testing." Full supervision means that the transmitters automatically transmit ("check-in") to the receiver on a regular basis to test the system for low battery, tamper, and inactive status.

Ensure Resident Safety with

VisionPro™

Wireless Emergency Call System

STANDARD FEATURES

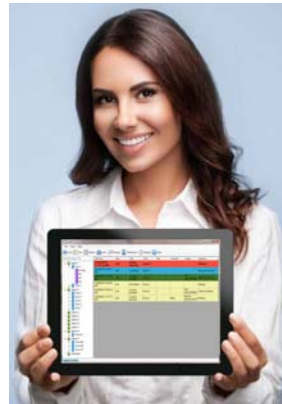

- 900 MHz spread spectrum technology
- Industrial computer & solid state hard drive
- Fully supervised battery and operation
- Alarm calls reset at source or console
- Password protection
- User replaceable long-life battery
- Internal & external batteries monitored
- Automatic backup
- Remote access
- Uninterruptible power supply
- Easy user programming
- Supports 65,000 transmitters
- Statistical call reports
- Call history log
- Toll free technical support
- Programmable call escalation

APPLICATIONS

- Hotel Staff Safety
- Government Buildings
- Mental Health Clinics
- Hospitals & Outpatient Clinics
- Schools & Colleges
- Retirement Apartments
- Office Buildings
- Correctional Institutions
- Airport Security
- Equipment Monitoring
- Temperature Monitoring
- Motion/Glass Breakage
- Equipment On/Off Notification

EQUIPMENT OPTIONS

- Wireless necklace and belt clip pendants
- Wireless emergency pull and/or push stations
- Wireless universal transmitters to monitor smokes
- Signal repeaters for expandable coverage
- Remote receivers for expandable coverage
- Door/Window scheduled monitoring
- Cigarette busters for restrooms
- Locator and elopement beacons
- Access control monitoring with WanderVision
- Two way radio output for base station
- Alpha-numeric pocket pager & LED reader boards
- Mobile App, Email & Cell phone notification
- Central monitoring station & 911 notification
- LED Corridor and Zone Lights
- Wireless computer and desktop displays
- Mobile App for Android, iPod, iPad, iPhone
- Remote access for reports and programming

Call Today

Our experienced and knowledgeable, technical staff would be happy to answer your questions or give you ideas on how to put wireless to work for your application.
