## Wireless Emergency Call Made Simple

### **Start Small, Think Big!**

VisionPro utilizes the Windows XP Professional® platform combined with 900 MHz spread spectrum wireless technology to link your staff or residents to on-site security personnel. With VisionPro you have the ability to start small and think big. Use wireless emergency call stations and devices that notify pocket pagers and display the device, room number or employee name initiating the alarm. Add Locators to display the person's location when alarm was generated or notification to cell phones, two way radios, email, cellular or Spectralink telephones or central monitoring station with escalation until the alarm is cancelled at the originating device.

### **Flexible Software**

Flexible fields in the software allow you to easily fill in the type of device, priority level, name description and emergency notification information as well as many other areas allowing you to customize the system to your specific requirements. Call analysis reports show all alarm events and how quickly staff responded. Text messaging to pagers or wireless phones eliminates the need for noisy and disruptive overhead paging. Need more? We can write custom software for your special application!

### **Monitoring Convenience**

Multiple consoles can log on to the system to view specific areas or an entire campus. Security personnel can view and respond to on-screen alarm information or receive wireless notification on a variety of wireless phones, pagers, and two way radios. Additionally the system can monitor restricted areas via wireless smoke, motion, glassbreak and door/window transmitters as well as pumps, generators, water leakage, temperature changes - any device that can provide a contact closure. Each device can be scheduled to send alarm notification complete with name, location and priority level.

### **The 900MHz Advantage**

Because the FCC allows higher transmit power for 900 MHz spread spectrum systems, Vision Pro provides superior in-building range and up to 10 times the range of 300 MHz products. It is also fully supervised and can transmit up to every 10 seconds to indicate low battery or inactive status. In contrast, it can take some wireless systems up to 24 hours to report a malfunctioning transmitter.

Ensure personnel and  
resident safety

## Wireless Emergency Call System

### STANDARD FEATURES

- 900 MHz spread spectrum technology
- Windows XP Pro<sup>®</sup> operating system
- Alarm calls reset at the source
- Easy user programming
- User replaceable long-life battery
- Supports 65,000 transmitters
- Call history log
- Low battery alert
- Password protection
- Visual/Audible alarm prioritization
- User replaceable long-life battery

### EQUIPMENT OPTIONS

- Wireless Pendant, Belt & Wrist Transmitters
- Wireless Emergency Pull Stations
- Patient, Code and Duty Stations
- Two way radio interface & voice alarm
- Corridor, zone and strobe annunciation lights
- Alpha-numeric pocket page alarm notification
- Networked consoles can select response areas
- Door/Window/Bed exit notification
- Smoke/motion/glass breakage detection
- Resident/Staff check-in status
- ADA compliant two-way area speakers
- PC, Standard and Mobile Master Stations
- Locators to position non-stationary alarms
- Statistical Call Analysis Reports
- Repeaters for wide area coverage

### APPLICATIONS

- Schools & Campuses
- Psychiatric Clinics
- Assisted Living Facilities
- Convalescent Centers
- Outpatient Hospitals/Wards
- Gated Communities
- Retirement Apartments
- Office Buildings
- Correctional Institutions
- Airport Security
- Equipment Monitoring
- Historic Buildings
- Temperature Monitoring
- Smoke Detection
- Motion/Glass Breakage
- Equipment On/Off Notification

### Call Today

Our experienced and knowledgeable technical staff would be happy to answer your questions or give you ideas on how to put the Vision family of wireless products to work on your campus.
