

# Protect Your Memory Care Residents with *WanderVision™*

## Affordable

WanderVision door controllers offer battery backup and wireless operation to eliminate the need for expensive installation costs. Changes to programming can be made at the door or over Wi-Fi. Wrist transmitter batteries are replaceable and are monitored for operation and low battery status. Designed to be easily installed by your own maintenance personnel, all equipment arrives at your community fully programmed to your requirements. Our free training and technical support is just a phone call away on a toll free number.

## Efficient

WanderVision offers seamless integration with the Vision Link Wireless Nurse Call and Mobile App. It can also send wander alerts to any nurse call system. Vision Link reports show who took the call, their response time and much more. With Mobile App send wander alerts over Wi-Fi to any Android or Apple phone or device including the resident name, photo and door location. Two way voice for Mobile App adds the ability for staff to talk to each other. Pagers, email, text messaging, and more can be set up to notify and escalate alarms until canceled.

## Flexible

You decide which doors each resident can pass. Maybe a memory impaired resident can leave the memory care area to visit a friend in assisted living but if she approaches an exit door the system immediately sends an alert to staff. Each door controller is programmable for local alarm at the door and automatic door locking when the resident is detected. A code or prox card will instantly unlock the door so a resident can be escorted through. Other wireless devices such as motion detectors, bed or chair exit pads, pull stations or patient stations can be added any time.

## Advanced

WanderVision uses highly accurate RFID to detect a wandering resident and to eliminate nuisance alarms. When a wanderer is detected, the alarm information including door name, resident name, and photo can be sent to staff. Alarms are cancelled by entering a code or scanning a prox card at the door controller or touching a call cancel magnetic wand to the wanderer's wristband. The system is fully supervised and will notify staff if a wristband or other device has a low battery, becomes inactive or leaves the building.

# WanderVision™

## Protects memory care residents from elopement risk with the most feature rich and simple to use wander management solution

### RESIDENT CENTERED

- WanderVision is engineered to ensure the safety of your memory impaired residents. Any at-risk resident whether in Memory Care or in Assisted Living can be equipped with a mini-transmitter either with a Push For Help button just like everyone else or equip them with a buttonless transmitter on a non-removable wrist band.

### EASY FOR CAREGIVERS

- When a resident wearing a transmitter approaches the door, a silent or audible alarm is activated. Depending on setup WanderVision can lock the door or simply notify staff via pocket pager, mobile app, email, text message and more. Mobile App downloads are free from the Apple or Google play store and can display a photo of the resident along with the door name and any other needed information. The alarm can be canceled by touching the caregiver magnetic wand to the pendant, by entering a code or touching an access control prox card at the door controller.

### NURSE CALL INTEGRATION

- WanderVision can be used with any nurse call system but when used with the Vision Link Wireless Nurse Call System, reports will show how often the resident attempted to leave the area, who responded to the alarm and a host of other reports that will automatically arrive via email as desired.

### MORE FEATURES

- Use with any call system via contact closure
- Pendants monitored for operation & battery
- Mobile App with 2-way voice calling
- Email, pager & text notification
- Alarm escalation until canceled
- Automatic management reporting
- Silent text messaging
- Quality assurance verification
- Timed egress alarm notification
- Mag lock & access control integration
- Alerts to staff by area

### MORE OPTIONS

- Wander, location, and fall alarm
- Wireless patient stations
- Wireless emergency stations
- Corridor and zone lights
- Custom scone indicator lamps
- Pocket pager & LED reader boards
- Email & text notification
- Telephone and cellular phone interface
- Spectralink®, Ascom & Panasonic interface
- Wireless masters for nursing stations
- Remote access for reports and programming
- Door/Window/Bed exit notification
- Smoke/motion/glass breakage detection
- Staff & resident check-in status
- Repeater/Locators for campus coverage
