The Experts in Wireless Nurse Call

VisionLink™ II

Wireless Nurse Call System

START SMALL, THINK BIG!

The Vision Link II® Wireless Nurse Call System uses the Windows 11 IoT Enterprise LTSC® operating system, 900 MHz spread spectrum wireless technology and an industrial computer. Transmitting devices signal when assistance is needed and provide optional wander alerts and resident location. The scheduler provides reminders to dispense medications, lock doors or perform other tasks. No expensive licenses or upgrades are required to add more equipment at any time. The Vision Link II® also includes eight call analysis reports, remote access, email notification and automatic backup at no additional cost.

FLEXIBLE SOFTWARE

Standard features include patient information, statistical call analysis reports with staff response times, active and passive resident and staff check-in, patient bed turn notification, flexible alarm notification with escalation and more. Engineered for the future, new developments are backwards compatible to ensure accommodation with the growth and requirements of your community. Wireless repeaters and stations are easily mounted when adding a new wing or building.

STAFF MOBILITY

Caregivers can receive notification at nurse station consoles, touch screen clients, Android and IOS devices, pagers, email, cell phones, iPads, LED reader boards, remote monitors and more. All events, including staff response times, are logged for password protected reports. Text messages can be silently sent from any console to any pocket pager, cell phone or employee group, eliminating institutional overhead paging.

VisionLink II

Wireless Nurse Call System

NO WI-FI REQUIRED

Because the FCC allows higher transmit power for 900MHz spread spectrum systems, Vision Link II provides superior in-building range and up to 10 times the range of 300MHz products. It is also fully supervised and notifies staff when a low battery or inactive device is detected. In contrast, it takes some systems up to 24 hours to report an inoperative station and some wired and wireless nurse call systems are not supervised at all.

STANDARD FEATURES

- Industrial computer & solid state hard drive
- 900 MHz spread spectrum technology
- Fully supervised battery and operation
- Direct maintenance alerts
- Alarm calls reset at the source
- Password protection
- Visual/audible alarm prioritization
- User replaceable long-life battery
- Eight combined system and call analysis reports
- Battery back-up included
- Email notification

MORE FEATURES

- Available ETL Listed to UL1069 or UL 2560
- Pendant elopement alarm & wander notification
- Programmable call escalation
- Advanced cloud call analysis & system reports
- API interface to CarePredict, ALIS, and more
- Timed egress alarm notification
- Staff presence indication with reports
- Wireless window transmitters
- Bed turn scheduler
- Customize staff notifications by shift
- Pendant locators with passive location updates
- Client licenses for administrative office computers

EQUIPMENT OPTIONS

- Wired or wireless location & elopement detectors
- Wireless necklace and wrist pendants
- Wireless patient and code blue stations
- Wireless staff and resident emergency stations
- Wireless push button and panic button stations
- LED Corridor & Zone Lamps (1 to 4 color options)
- Alpha-numeric pocket pager & LED reader boards
- SNOM Phone license DECT phones
- Mobile App for Android and iPod, iPad, iPhone
- Mobile App Voice for staff to staff voice communications
- Email, Two way radio, and cell phone interface
- Networked consoles can select response areas
- Remote access for reports and programming
- Wireless Door/Window/Bed exit notification
- Wandering patient integration options
- Active or passive resident check-in status
- Repeater/Locators for campus coverage
- Computer, server and client consoles
- Remote receivers for campus connections to interconnect buildings
- No ongoing fees or licenses
