Protect Your Memory Care Residents with *WanderVision Plus*

✓ AFFORDABLE

WanderVision Plus door controllers provide peace of mind knowing your residents are safe and secure. They are fully programmable and changes are easy to make via Ethernet or Wi-Fi. Resident wristbands have cost-efficient replaceable batteries and are monitored for operation and low battery status. Designed for ease of use, all equipment arrives fully programmed to your requirements. Our free training and technical support is just a phone call away at our toll-free number.

✓ EFFICIENT

WanderVision Plus works with any nurse call system but offers seamless integration with Vision Link and MicroVision Wireless Nurse Call systems. Optional Vision Link reports show who took the call, their response time, and more. The mobile app sends wander alerts via Wi-Fi to any Android, iPhone or iPad and also include the name and photo of the resident, while also adding the ability for staff to talk to each other. Pocket pagers, email, text and more can notify and escalate alarms until canceled.

✓ FLEXIBLE

You decide which doors each resident can pass through. The system sends an immediate alert to staff anytime a resident wanders into an undesigned area, and each door is programmable for automatic locking when the resident is detected. A code or caregiver pendant will instantly unlock the door so a resident can be escorted through.

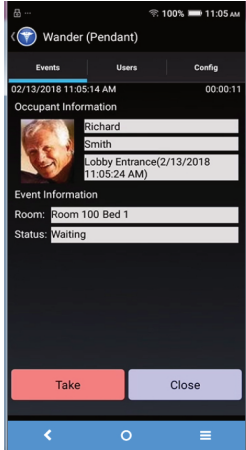

✓ ADVANCED

WanderVision uses highly accurate RFID technology to detect a wandering resident and to eliminate nuisance alarms. When a wander tag is detected, the alarm information, including door name and resident name, will be displayed and can be optionally sent to staff. Alarms are cancelled by entering a code at the door controller or touching a call cancel magnetic wand to the wanderer's wristband if used with a Vision Link or MicroVision system.

WanderVision *Plus*

by Systemstechnologies

Protects memory care residents from elopement risk with the most feature-rich yet simple-to-use wander management solution.

RESIDENT CENTERED

WanderVision Plus is engineered to ensure the safety of your memory impaired residents by equipping them with a mini-transmitter that features either a Push-For-Help button or a buttonless transmitter on a non-removable wrist band.

EASY FOR CAREGIVERS

When a resident wearing a transmitter approaches the door, a silent or audible alarm is activated. Depending on setup, WanderVision can lock the door or simply notify staff via pocket pager, mobile app, email, text message and more. WanderVision Plus can be set to always alarm or just when the resident is in the field and the door opens. Our mobile app for Vision Link includes unlimited free downloads from the IOS or Google play store and can display a photo of the resident along with the door name and any other needed information.

NURSECALL INTEGRATION

WanderVision Plus works with any nurse call system, but when used with the Vision Link Wireless Nurse Call System, reports will show how often the resident attempted to leave the area, who responded to the alarm and much more. If notification is required at nurse stations, any of our systems can display the resident name and door name alarm information to staff.

MORE FEATURES

- Use with any call system
- Wall or desk mount units
- Devices monitored for operation & battery
- Optional Mobile App with 2-way voice calling
- Optional email, pager & text notification
- Dual or single condition door set up
- Alarm escalation until canceled
- Automatic management reporting
- LAN network connectivity
- Silent text messaging
- Quality assurance verification
- Timed egress alarm notification
- Remote access for reports and programming
- Alerts staff by floor or area

MORE OPTIONS
