## The Experts in Wireless Nurse Call

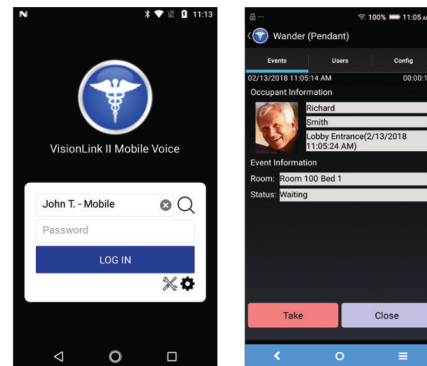

Looking for Nurse Call  
That helps staff efficiency?

## *Vision Link II* *Mobile App™* For Android & IOS

### ONE LICENSE, UNLIMITED DOWNLOADS

Add a Mobile App license to your Vision Link II master station or server and staff will receive alerts on their Android or IOS smart phone. Alerts can be sent to as few or as many smart phones as desired and can be escalated until canceled at the originating pendant or station. Once the app is opened, staff will continue to receive the call information regardless of what else they are doing at the time. It can read the alarm aloud, through a headset or Bluetooth earpiece, or vibrate when a call is received. The mobile app displays the resident name and photo with every call and adds the name assigned to a door or area when our wireless elopement detectors are used. Management can always see who is logged on at any time to ensure staffing levels are met on every shift.

### IMPROVE STAFF EFFICIENCY

When an alarm is initiated by a resident, a staff member simply touches the "Take" icon. This automatically updates all other staff members' mobile devices with the name of the person who is responding to the resident's call. When the call is reset at the initiating pendant station or other device, that information is displayed at all staff smart phones for five seconds before clearing. Nursing staff can enter notes about the call if desired or select an action from a customized, pre-programmed list such as Comfort, Water, Bathroom, Food, Medication, or anything you wish to track or invoice to the room. All this detailed information is available in your reports so you can see who is handling the most resident calls, staff response times, how much time is spent with each resident and more.
